1. (Previously presented) A method for sending an order to an electronic market, comprising:

   sending an order on behalf of a trader from a first electronic market to a second electronic market, wherein the first electronic market comprises a first computerized matching process that is configured to automatically match bids and offers received from remote client devices to trade a first tradeable object and the second electronic market comprises a second computerized matching process that is configured to automatically match bids and offers received from remote client devices to trade a second tradeable object, and wherein the second tradeable object is different from the first tradeable object, the order being sent using a microprocessor executing one or more instructions.

2. (Original) The method of claim 1 wherein the step of sending is performed when a condition is satisfied.

3. (Original) The method of claim 2 further comprising the step of receiving a first order at the first electronic market.

4. (Original) The method of claim 3 wherein the condition comprises at least a portion of the first order being filled.

5. (Original) The method of claim 2 further comprising the step of receiving a market event request message at the first electronic market that establishes a condition.

6. (Original) The method of claim 2 wherein the condition is in the form of a lookup table.

7. (Original) The method of claim 1 further comprising the step of sending a message from the first electronic market to the second electronic market instructing the second electronic market to modify the order sent on behalf of the trader.

8. (Original) The method of claim 7 wherein the message to modify the order sent on behalf of a trader is sent when a second condition has been satisfied.

9. (Previously Presented) The method of claim 1 wherein the electronic market comprises a matching engine that matches bids and offers for a given market according to a first-in-first-out (FIFO) matching algorithm.

10. (Original) The method of claim 1 wherein the electronic market comprises software running at an electronic exchange.

11. (Original) The method of claim 1 wherein the electronic market comprises software running at a point of access that is outside of the electronic exchange.

12-21. (Canceled)

22. (Previously Presented) A computer readable medium containing program instructions for causing a microprocessor to execute a method for use by a trader in an electronic trading system that includes at least one computer terminal connected over a network to at least one electronic exchange, comprising:

sending an order on behalf of a trader from a first electronic market to a second electronic market, wherein the first electronic market comprises a first computerized matching process that is configured to automatically match bids and offers received from remote client devices to trade a first tradeable object and the second electronic market comprises a second computerized matching process that is configured to automatically match bids and offers received from remote client devices to trade a second tradeable object, and wherein the second tradeable object is different from the first tradeable object.
